

Wonnemann - Thick veneer edge banding

A must for a good profile!

PUR bonding

The high-quality thick veneer edge banding from Wonnemann is manufactured from selected veneers that are bonded together in multiple layers. The thick veneer edge banding is (normally) produced endless on the roll, which makes it perfectly suited for efficient processing. You can choose the level of the finish and whether a base coat or a lacquer coat is applied, which promises economic and optimal transfer into production.

Immaterial whether it's for furniture in the office, bedroom or living room or items such as staircases and doors – the possible applications are endless! The advantageous PUR (**polyurethane**) bonding provides you with an edging that is extremely resistant to

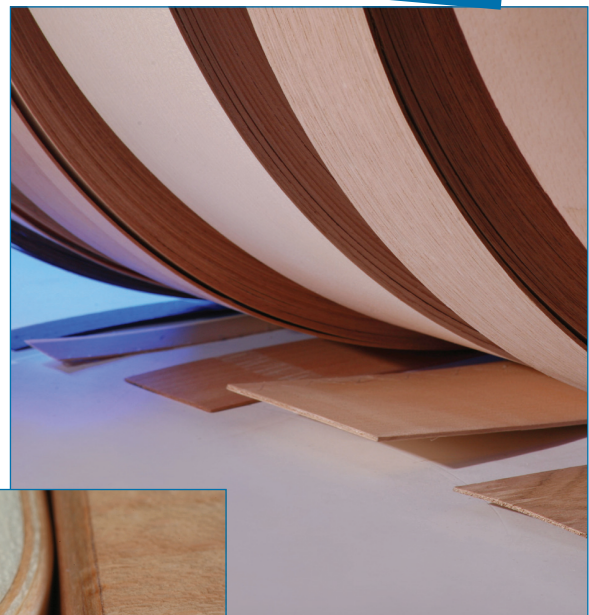

- ▶ moisture,
- ▶ temperature (> 150° C) and
- ▶ atmospheric changes.

It is advantageous for the processor that varying temperatures between the storage location and production facility do not have any affect on the quality of the thick veneer edge banding. Utilisation of the thick veneer edge banding with PUR (polyurethane) bonding is also recommended for furniture that is located in damp environments or exported to foreign countries.

Seize a competitive advantage.

The thick veneer edge banding provides you with the opportunity to order any panel products with a distinctive and individual profile. This allows the beautiful aesthetic appearance of the workpiece to be accentuated and for an emphasis to be placed on the design. The feeling of the furniture, stairs or doors can be significantly enhanced depending on the thickness of the edging and radius selected.

Wonnemann thick veneer edge banding is available in a variety of designs to fulfil all of your edging requirements.
