

Wonnemann - Multipla light

A must for individual interiors!

Wonnemann-Multipla light is produced from selected peeled Fuma veneers and tightly glued inserts. These exceptionally **lightweight solid wood panels** (340 kg/m³) are characterised by an unusually high degree of stability thanks to the even construction and multiple transverse insert veneers. This ensures an extremely high load-bearing capacity and a smooth surface.

The special combination of multiplex and block boards means that the material is suitable for many applications, which include:

- ▶ individual interior fittings
- ▶ various office equipment, e.g. tables
- ▶ modern living concepts, e.g. shelves
- ▶ partition walls
- ▶ shopfitting, exhibition and stage construction
- ▶ vehicle and caravan construction
- ▶ entrance doors.

When it comes to the design of working and living space everyone has their own ideas. These ideas can be realised by using Multipla light. The product's unique features, namely a **solid wood with a high degree of stability and low weight**, mean that the material is ideal for today's demanding customers that are on the move. Our various processing and finishing options offer a significant degree of leeway for individually tailored solutions. Whether it's lacquered, coated or decorative veneer, the typical character of the material creates a homely and comfortable atmosphere in all areas and harmonises well with current furniture design. A must for individual interiors!

Benefit from Multipla light!

The reasons for utilising lighter materials in furniture and interior fittings are vast. Current furniture trends, easy handling, cost reductions in processing, assembly and transport – our increasingly mobile society demands lightweight furniture. A challenge we have set ourselves.

Wonnemann-Multipla light is available in a variety of designs to fulfil all of your panel requirements.
